

Type 12-CB

Seismic Cable Brackets

Seismic Cable Brackets shall consist of formed steel with the provisions to positively attach seismic cable from 30° - 60°. Brackets shall be dynamically tested to destruction to determine allowable ratings. Bracket shall be designed to carry the tension load from the attached angle or channel to the structure. Bracket shall have the capability to be installed at an arc from 30° - 60°. Where applicable brackets shall have the capability to be post installed.
