VMC Group receives approval of roof-curb applications for High Velocity Hurricane Zone in Florida Building Code

Bloomington, NJ – August 8, 2018 - VMC Group is pleased to announce the approval for rating of the VMC Group's TeleCurb® and P-Series Rooftop Curbs to the wind requirements for Miami-Dade Building Code. The roof curbs and mounting configurations have been structurally designed, tested and approved to comply with the High Velocity Hurricane Zone of the Florida Building Code.

"VMC Group continues to evolve our engineering, design and manufacturing capabilities to allow our customers to stay compliant with changing building codes nationwide," states John P. Giuliano, President of VMC Group. "We continuously strive to provide solutions not only at the national level, but also in markets with unique, environment specific conditions. This latest approval is another example of our intense focus on customers."

The Notice of Acceptance by the Department of Regulatory and Economic Resources (RER) Board and Code Administration Division demonstrates that drawings submitted for VMC Group's TeleCurb® and P-Series Rooftop Curbs have been thoroughly evaluated and approved for use in Miami Dade County and other high wind areas where allowed by the Authority Having Jurisdiction.

VMC GROUP
THE POWER OF TOGETHER

For nearly ten decades, VMC Group has been recognized as a world leader in the design and manufacture of vibration isolation and seismic energy management technologies. VMC Group and their Engineering Services Division have been providing Special Seismic Certification to Fortune 500 companies and manufacturers of HVAC, power generation and fire protection systems for more than 10 years. VMC Group is ISO Accredited by the International Accreditation Service (IAS) as a Product Certification Agency (PCA-127), Third-Party Certification Body making VMC the first and only product certifying agency for special seismic certification of nonstructural building components and their mounting configurations.
